### BetterHelp *(Rails, React/Redux)*

[Live](#) | [GitHub](#)

A search service powered by crowd-sourced review forum inspired by Yelp with a React frontend and RESTful, Ruby on Rails backend

- Renders view layer with React to create a single page view that makes for friendly user experience
- Leverages custom SQL queries to preload data, reducing response time and allowing for scale
- Integrates Google Maps API for geolocation based searching
- Permits users to create, read, update, and delete reviews for relevant businesses
- Utilized React Lifecycle methods, custom backend API endpoints, and a normalized Redux state in order to execute lazy loading of database information while increasing overall scalability

### Fatal-Start *(JavaScript, Canvas, HTML5)*

[Live](#) | [GitHub](#)

A side-scroller browser game inspired by the classic tv series Dragon Ball Z

- Utilizes ES6 syntax JavaScript and HTML5 canvas to render elements onto the screen
- Implements user interface with event handlers and features collision detection algorithm

### KINGS *(Rails, React/Redux)*

[Live](#) | [GitHub](#)

A full-stack web app clone of the e-commerce site Etsy

- Leverages client-side validations to prevent unnecessary server requests
- Persists shopping cart across sessions using cookies

### Fume *(Ruby)*

[GitHub](#)

A ORM (Object Relation Management) and MVC (Model View Controller) framework written in Ruby

- Provides basic routing capabilities that render corresponding views
- Router provides matches from incoming requests with regular expressions
- Controller base class with redirect methods, params parsing, and session cookies.
